

PRODUCT ENVIRONMENTAL PROFILE

DLPM1-230L

Parafoudre BT de Type 2 ou 3 pour éclairage à LED classe 1 – DLPM range

Company Information

CITEL
29 boulevard Edgar Quinet
75014 Paris – France
www.citel.fr
contact@citel.fr

Methodology

PEP has been performed according to the PCR version PEP-PCR-ed4-2021 09 06 and PSR version PSR-005-ed3.1-2023 12 08 issued by the PEP ecopassport program.

For further information, please see the website of the program www.pep-ecopassport.org

GENERAL INFORMATION

Reference product	<p>The DLPM series is a line of AC surge arresters for DIN rail mounting designed for installation inside pole-mounted enclosures: it's very compact size and low profile make it compatible with DIN rail mounting in these enclosures.</p> <p>This series features a mechanical disconnection indicator.</p> <p>To improve the efficiency of its low-voltage surge arresters, this range has the VG technology that is patented technology that combines networks of high-energy varistors with specific gas-discharge tubes (GSG) : The Type "1+2+3" "VG" surge arresters thus achieve better performance in terms of:</p> <ul style="list-style-type: none"> - Clamping voltage, - Service life (thanks to the elimination of leakage current), - Service continuity (absence of follow-current), - End-of-life behavior. <p>The representative product is DLPM1-230L, Type 2 monophasic surge arresters because it is the best-selling product of the DLPM range.</p> <p>This PEP is validated for 5 years.</p>
Functional unit	<p>Protect, against direct and indirect effects of lightning or against transient overvoltages, electronic equipment connected to networks with a rated operational voltage of up to 1000 V AC or 1500 V DC, via a surge arrester of type 2, with 1+1 poles, according to the appropriate use scenario, and for the reference service life of the product of 20 years.</p>
Specifications of the representative product (product code 355913)	<p>This protection is ensured in accordance with the following parameters for the product in this PEP:</p> <ul style="list-style-type: none"> - Surge protective device type according to the standard IEC 61643-11 = T2 - Number of protected conductors: $N_p = 1+1$ - Maximum continuous operating voltage: $U_c = 320$ V - Rated discharge current 15 pulses at 8/20 μs: $I_n = 5$ kA - Voltage protection level $U_p = 1.5$ kV - Combined Wave Test (IEC 61643-11) Class III Test: 1.2/50 μs – 8/20 μs: $U_{oc} = 10$ kV - Current drawn by the surge protective device and his related functions: $I_c = 0$ μA - Frequency range of the low-voltage system: 50 Hz to 60 Hz
Software and database used	<p>EIME 6.3 software from LCIE Bureau Veritas.</p> <p>Databases CODDE 2025-04, ELCD and ESR (WEEE), indicator set PEF EF 3.1</p>
Standards	<p>NF EN 61643-11/IEC 61643-11: Low-voltage surge protective devices - Part 11: Surge protective devices connected to low-voltage systems - Requirements and test methods</p> <p>UL1449 ed.5: Underwriters Laboratories Safety Standard for Surge Protective Devices (SPD)</p>
Geographical representativeness	<p>[A1-A3] : China</p> <p>[A4], [A5], [B1-B7], [C1-C4]: Europe</p>

CONSTITUENT MATERIALS

All useful measures have been adopted to ensure that the materials used in the composition of the product do not contain any substances banned by the legislation in force at the time of marketing (for example: REACH and ROHS).

Total weight of reference product	78.32E-3 kg including the product, its packaging and additional elements and accessories Product Mass = 65.04E-3 kg, Package Mass = 10.00E-3 kg, Notice Mass = 3.28E-3 kg
--	--

REPRESENTATIVENESS

Time Coverage:

Reference years: The modules used cover the period from 2014 to 2024.

Current status: There is considerable disparity. While some transport modules (air freight, trucks) are very recent (2024), other end of life data such as “EoL, Small Household Elec Equip.” date back to 2014.

Collection: For manufacturing processes (injection, bending, etc.), the data in the CODDE database mainly date from 2022, providing good representativeness for a current analysis.

Geographical Coverage:

Declared deviation: Although final assembly and raw material manufacturing take place in China, many of the modules used are of the RER (Europe) or EU-27 type (e.g., PA6.6, steel, copper).

Methodological justification: The decision was made to prioritize the technical nature of the material rather than its geographical origin when the specific “China” module did not exist in the CODDE 04-2025 database.

Compliance points: Certain critical flows such as the electricity mix (“Electricity mix; China”) or specific components (PWB connectors) are well modeled in the CN zone (China), thus limiting overall uncertainty.

Technological Coverage:

Technical representativeness: The use of “[configurable]” modules (e.g., steel bending, injection molding) demonstrates a desire to adhere to actual manufacturing steps at the plant.

Primary vs. secondary data: The data used is mainly secondary data from the EIME (CODDE) database but chosen to accurately represent the design of the commercial references cited.

ENVIRONMENTAL IMPACTS

Modules	Life Cycle Stage
A1-A3 Manufacturing Stage	<p>Manufacturing takes place in CITEL plant in Shanghai. The plant has the ISO 14001 and ISO 9001 certification.</p> <p>The A1-A3 module covers the extraction and processing of raw materials [A1], transport to the manufacturer [A2] and manufacturing [A3].</p> <p>The reference product DLPM1-230L is divided into three sub-assemblies:</p> <ul style="list-style-type: none"> - The TMMOV1-511 module - The DLPM1 base - The Tube discharge BH S NPE 800 <p>The modelling also includes the product instructions and its primary packaging, namely a single cardboard box.</p> <p>The energy module use is Electricity Mix; production mix; low voltage; 2022; China, CN.</p> <p>The transportation of raw materials or product until the logistic platform is included.</p>
A4 Distribution Stage	<p>The product is distributed exclusively in Europe from our logistics site in France.</p> <p>Transportation of the product in its packaging from the manufacturer's last logistic platform to the distributor and from the distributor to the installation place. We consider that the product is mainly sold in Europe. We are therefore basing our calculations on the scenario described in section 5.5.3 p22 of PCR ed4, namely intra-continental transport: 3,500 km by lorry >27t.</p>
A5 Installation Stage	<p>For the installation of the product, only standard tools (electric screw) are needed.</p> <p>Installation at the place of use and disposal of packaging waste.</p> <p>The product packaging is disposed of in Europe, as we consider the product to be sold entirely in Europe.</p> <p>The module Energy use is Electricity Mix; production mix; Low Voltage; 2022; Europe.</p>
B1-B7 Use Stage	<p>This product requires no servicing, no maintenance or additional products. Only B6 module is applicable, the others (B1 to B7) have impacts equal to 0.</p> <p>The representative product is only used in Europe. The calculation is based on the use scenario in Europe, operation for 20 years, load factor: 100% of Ic.</p> <p>The module Energy use is Electricity Mix; production mix; Low Voltage; 2022; Europe.</p> <p>We calculate the energy consumption of our product based on a reference lifespan of 20 years and express it in watts per hour.</p> <p>The formula is as follows: $E = U_0 \times I_c \times A \times 20 \times 365 \times 24$ in W.h</p> <p>For a monophasic product, $A = 1$.</p> <p>The actual mains voltage U_0 between L and N/PE is equal to 230V for a 220/240V application and $I_c = 0\mu A$ for 100% VG.</p>
C1-C4 End of life Stage	<p>The C1-C4 module covers the desinstallation [C1], transport to waste treatment plant [C2], treatment of waste with a view to its reuse, recovery or recycling [C3] and disposal [C4]. The product is covered by ESR data under the category EoL Small Household Electrical Equipment. We consider the product to have reached the end of its life in Europe.</p>
Module D	<p>Module D covers the net benefits and costs arising from the reuse of products or the recycling or recovery of energy from end-of-life materials.</p> <p>We are using the [0;100] method: we are counting as profit what will generate recycled material.</p>
